May 2017 – MEDIA RELEASE

International Products Corporation Features Membrane Cleaners at The Clean Show

Burlington, New Jersey, USA: [International Products Corporation](#) (IPC), manufacturer of specialty cleaners and P-80® temporary rubber assembly lubricants, will exhibit and promote their products at [The Clean Show](#) at the Las Vegas Convention Center from June 5th – 8th. Show attendees are encouraged to visit IPC at booth #3600 for expert technical support on how to save time, energy, and labor costs on membrane and textile cleaning and equipment maintenance. Free product samples are available for initial trial testing.

Today's complex cleaning tasks make it difficult to find consistently effective membrane cleaners. There are many cleaning applications in textile manufacturing and industrial textile laundering. In textile factories, manufacturing equipment, accessories, water recycling system filters, and wastewater filters must all be cleaned and maintained in order to keep the plant running efficiently. Minimizing downtime, by using the safest, most economical, effective, and environmentally friendly products, is critical. Returning filter system flux rates back to 100% is also important and can be accomplished with the right cleaning regimen.

IPC has been selling cleaners to the [filter membrane](#) and [textile industry](#) for over 30 years. Their proprietary-formulated cleaners work effectively at restoring 100% flux at safe pH ranges and are compatible with UF, RO, Ceramic, and NF Systems. IPC has a wide variety of chemistries available and an on-site R&D laboratory that offers FREE technical assistance and compatibility testing.

IPC's cleaners features and benefits include:

- Fast-acting, specially formulated products effective on a broad range of soils
- Reduce or eliminate membrane replacement
- Save time, energy, and labor costs
- Eliminate multiple-step cleaning cycles
- NSF-registered as USDA-A1 Cleaners
- Solvent free, phosphate free, and non-corrosive
- Concentrated liquid formulas dilute easier than powder detergents
- Free-rinsing
- Competitively priced
- FREE SAMPLES available for initial trial testing

P-80® Temporary Assembly Lubricants are ideal for assembly, maintenance, and repair of appliances, pumps, and seals. Washers, dryers, and many other appliances have rubber, or soft plastic components such as hoses, O-rings, seals, grommets, plugs, and more. The slip resistance of these parts makes assembly difficult. P-80® temporary rubber assembly lubricants significantly reduce friction, helping these parts slide easily into place. P-80® is also an excellent pump seal

lubricant. P-80® lubricants are water-based and do not contain alcohol or petroleum distillates, so they will not cause rubber to dry out or harden. P-80® does not contain silicon or other persistent ingredients, so once dry, you have a tight fitting part.

Advantages of using P-80® lubricants:

- Non-toxic, safe, and ready-to-use
- Reduce the force required for assembly
- Reduce rejects and part damage
- Reduce slippage and musculoskeletal injury
- Allow tight fitting part design
- Improve product performance
- Temporary – once dry, the lubrication is gone

About International Products Corporation: IPC manufactures specialty chemical products, including [cleaners](#) and [assembly lubricants](#). Their full line of precision cleaning products includes biodegradable, alkaline, acidic, neutral, and enzymatic products used in a broad range of industries and applications. Their P-80® temporary rubber lubricants are uniquely formulated for the installation of belts, bushings, grips, grommets, hoses, O-rings, seals, and other parts. All of IPC's products are made in the USA and are sold worldwide.
